

## EcoSafe® ~6400™ Compostable Bags

*"Products for a Sustainable Earth"...*

The ultimate in recycling; EcoSafe~6400 bags support the safe and sanitary collection of food and yard waste that can then be composted and returned to the natural bio-cycle in a home or community compost.

Humus is the nutrient rich dark-brown organic component of soil that is derived mostly from decomposed food scraps and plant waste and often animal remnants and manure. It is Nature's natural pesticide and the complete food source for plants.

Humus is "all organic" and "chemical free" and contains the entire soil reserve of nitrogen and significant amounts of other nutrients required to support plant growth. Humus is critical for its water-retention properties and most importantly, it restores the organic carbon and nutrients that increase the fertility of the soil.

As 21<sup>st</sup> century farming shifts from the 20<sup>th</sup> century practices of chemical fertilizers and carbon depletion to "organic" food production and as most of the cultivated vegetation is harvested instead of being left to decay and replenish the soil, returning our organic waste to the natural bio-cycle in the form of compost is absolutely critical.

EcoSafe® and Nature thanks you! And we also thank you for using our products and working with us to help change the way communities manage waste by returning your food scraps and yard waste to the natural bio-cycle through composting.

Certified to meet the stringent standards of ASTM D6400-04, EcoSafe® ~6400 bags are "**eco-safe**", support plant germination and contain no regulated metals.

EcoSafe® ~6400 compostable bags are a perfect liner for the EcoSafe Kitchen Collector. These bags are as strong and robust as an ordinary bag but safely and very quickly degrade and biodegrade to become part of the humus in compost.

- Certified 100% Biodegradable
- Certified 100% Compostable
- Certified "**eco-safe**"
- Robust and leak-proof
- Star sealed for superior load capacity
- Shelf stable, similar to paper

Independently tested and certified by the Biodegradable Products Institute, the US Composting Council and by Cedar Grove Field Testing Labs.

EcoSafe® products are manufactured in Canada and the USA
